

# MACHINE SAFETY

## GUARD YOUR ASSETS WITHOUT COMPROMISE

Every manufacturer knows how important it is to keep their production lines moving. Lost production time, for any reason, costs your business money. But lost production time from injury will cost you more than just money, it could cost you your business. Production safety is of paramount importance when considering the consequences of the failure to maintain a safe working environment for your employees.

The Auto Control Systems Safety Division offers a complete safety solution that both meets and, where needed, exceeds the legislative requirements. From safety audits to engineering, installation and commissioning, Auto Control Systems will deliver a product that not only meets your needs, but does so in a cost effective manner.

Staying aware of all the ISO and Australian/ New Zealand Standards and the constant updates and changes to them can be quite a formidable task. Fortunately Auto Control Systems Safety Division has an in-depth, extensive, working knowledge of these standards. We remain on top of any and all changes as they happen which lets us provide you with the right information when determining if your

existing safety system meets those standards - or what you might need to do to align your business with them.

Auto Control Systems simply doesn't compromise on safety. Machines and electricity can be volatile and dangerous which is why we manage and control them throughout your manufacturing processes. With a TÜV certified engineer on our staff, we ensure the end result will adhere to any

and all applicable national and international law. That's peace of mind for you.

Our commitment to safety remains throughout each project. We have an impeccable record in this, including outcomes such as providing a world leading power and automation company to achieve the worldwide number one ranking in machine and production safety in their factory in Perth, Western Australia.

Providing safety consultation and auditing, we will help you know what needs to be done so your business and its assets will meet all relevant safety standards and guidelines.

Auto Control Systems uses and recommends products whose build quality and standards compliance are thoroughly tested to achieve the highest grade possible. Staying ahead of the curve, these safety products are market leaders in quality, reliability and innovation. They have a proven global track record and used by multi-national companies such as Ford Motor Company, ABB and Volkswagen.

Auto Control Systems will custom design and install a complete machine guarding solution compliant with all existing machine safety requirements. If your installation

requires doors and entry/exit points for materials or people, Auto Control Systems can easily design and install a complete electronic safety system that will work seamlessly with our guarding system. We can include almost any brand of electronic safety equipment such as e-stops, door sensors, interlocks, light curtains and more. Combined, these two systems are state-of-the-art in safety – few companies can provide such a complete solution.

Having designed, installed and commissioned award winning safety systems for companies such as ABB, CSR Gyprock and BGC, you can have confidence that Auto Control Systems will give you a safety solution that is value for money, without compromise.
